APPARATUS AND METHOD FOR PROVIDING TRANSACTION HISTORY INFORMATION, ACCOUNT HISTORY INFORMATION, AND/OR CHARGE-BACK INFORMATION

RELATED APPLICATIONS

This application claims the benefit of priority of U.S. Provisional Patent Application Ser. No. 60/262,167, filed Jan. 16, 2001, and entitled "APPARATUS AND METHOD FOR PROVIDING TRANSACTION HISTORY INFORMATION, ACCOUNT HISTORY INFORMATION, AND/OR CHARGE-BACK INFORMATION", the subject matter of which is hereby incorporated by reference herein.

FIELD OF THE INVENTION

The present invention pertains to an apparatus and method for providing transaction history information, account history information, and/or charge-back information and, in particular, to an apparatus and method for providing transaction history information, account history information and/or charge-back information which can be utilized by a merchant or vendor in processing a transaction in order to prevent and/or in order to reduce the incidence of any one or more of credit card fraud, credit account fraud, charge card fraud, charge account fraud, debit card fraud, debit account fraud, and/or cyber-shoplifting.

BACKGROUND OF THE INVENTION

Merchants, vendors, or providers, of goods, products, or services, loss millions of dollars each year as the result of non-payment of their receivables. Non-payment of receivables can result from credit card fraud, charge card fraud, debit card fraud, cyber-shoplifting, charge-backs, bank fraud, check fraud, the stopping of issued checks, checks returned for insufficient funds, and other causes or activities.

Merchants, vendors, or providers, of goods, services, or products, have long experienced credit card fraud, charge card fraud, debit card fraud, cyber-shoplifting (such as when individuals deny making an on-line or non-face-to-face transaction involving credit cards, charge cards, debit cards, or any other advancement of credit), charge-backs (which occur when a credit, charge, or debt, services issuing entity or bank forces the merchant, vendor, or provider, to pay back funds paid thereto along with possibly imposing charge-back fees), bank fraud, check fraud, the stopping of issued checks, checks returned for insufficient funds, and other activities.

With the tremendous increase in telephone-based transactions as well as on-line transactions, such as those occurring on, or over, the Internet and/or the World Wide Web, risks of non-payment have become even greater. These non-payment risks have resulted from the non-face-to-face nature of telephone or on-line transactions which involve credit cards, charge cards, debit cards, or their respective accounts, which do not allow merchants, vendors, or providers, the opportunity to verify and/or otherwise ensure that they are entering into transactions with the true account holder or account owner.

As a result, many merchants, vendors, or providers, are having their charges or receivables challenged, disputed, and/or denied, by dishonest individuals. This has resulted in charge-backs to the merchants, vendors, or providers, which entail having a bank or issuer associated with the account holder's or the account owner's account impose a return of

2

funds. Other fees may also be imposed on the respective merchants, vendors, or providers.

As a result, the respective merchants, vendors, or providers, can lose in a number of ways. They lose the funds received, they may not have the goods, products, or services, returned, they may be charged charge-back fees, and/or they can experience opportunity costs (i.e. expended employee time and/or company resources) in dealing with the disputed charges.

Activities by dishonest individuals, in ordering a good, product, or service, only to later deny making the order or deny entering into the transaction, so as to avoid payment, while not returning the respective goods, products, or services, has come to be known as "cyber-shoplifting" and can cost merchants, vendors, or providers, millions of dollars annually. Losses which result from these and other forms of credit card fraud, charge card fraud, debit card fraud, bank fraud, check fraud, the stopping of issued checks, checks returned for insufficient funds, and other activities result in even greater losses to merchants, vendors, or providers.

Losses to merchants, vendors, providers, any of their banks, any of their respective vendors or providers, and/or any of their insurers, if applicable, in the long run, can ultimately get passed on to, and can be shared by, all of us.

No system or method exists which can provide the means for allowing merchants, vendors, or providers, to protect themselves from losses or risks of losses which can result from credit card fraud, charge card fraud, debit card fraud, cyber-shoplifting, charge-backs, bank fraud, check fraud, the stopping of issued checks, checks returned for insufficient funds, and other activities.

SUMMARY OF THE PRESENT INVENTION

The present invention pertains to an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which overcomes the shortfalls of the prior art.

The present invention provides and apparatus and method for providing transaction history information, account history information, and/or charge-back information which can be utilized by a merchant, vendor, or other entity, in processing, and/or in assessing the processing of, a transaction in order to prevent and/or in order to reduce the incidence of any one or more of credit card fraud, credit account fraud, charge card fraud, charge account fraud, debit card fraud, debit account fraud, check fraud, checking account fraud, and/or cyber-shoplifting.

The present invention can be utilized to in order to process information regarding fraudulent use of any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts. The present invention can also be utilized to in order to process information regarding checks returned due to insufficient funds, checks for which stop payment orders have been made, disputes and/or denial of payment assertions made in conjunction with any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts.

The present invention can also process information regarding past denials of liability or responsibility regarding a transaction, past charge-back activity involving any one or more of a credit card, a credit account, a charge card, a charge account, a debit card, a debit account, or a checking account.

The information obtained from the present invention can be utilized by a merchant, a vendor, and/or any other entity, in

3

order to process a transaction, and/or in order to assess whether or not it should fulfill an order relating to a transaction.

The present invention can be utilized in order to perform risk management in transactions involving payment by any or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts. The present invention can also be utilized in face-to-face transactions, non-face-to-face transactions, telephone transactions, on-line transactions, mail order transactions, and/or in any other non-cash transactions.

The present invention can be utilized in order to provide information at any time during, prior to, and/or subsequent to, a transaction. The present invention can also be utilized by a merchant, vendor, or other entity, in order to assess an individual's or an entity's past transaction history, account history, or charge-back history, in order to determine if the individual or entity has had a history of, or could be a risk in, denying being party to a transaction involving a credit card, a credit account, a charge card, a charge account, a debit card, a debit account, or a checking account, disputing a transaction involving credit card, a credit account, a charge card, a charge account, a debit card, a debit account, passing or attempting to pass a bad check, stopping payment of an issued check, and/or in other ways attempting to defraud or otherwise obtain goods, products, or services, without paying for same, shopping same, and/or cyber-shoplifting same.

The present invention can be utilized in order to allow a merchant, vendor, or provider, of goods, products, and/or services, to process information regarding a counterpart or counterparty to a transaction in order to determine if the counterpart or counterparty could be a risk, could be a credit risk, or might not fulfill payment obligations relating to a transaction.

The present invention can provide transaction history information, account history information, and/or charge-back information, any one or more of during a transaction, during a transaction authorization process, subsequent to a transaction, subsequent to a transaction authorization process, prior to an order fulfillment process, and/or during an order fulfillment process.

The present invention can also process information received, concerning any of the herein-described individuals or entities, from any one of more of credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, and/or any banks and/or financial institutions and/or other entities which facilitate, manage, operate, and/or administer, any of the herein-described accounts.

The present invention can process information received, concerning any individuals or entities, from any merchants, vendors, and/or providers of goods, products, and/or services, credit agencies, and/or any other individual, individuals, entity, and/or entities.

The apparatus includes a central processing computer which can perform any of the herein-described processing routines and/or processing operations, as well as any of the communication operations described herein as being provided by the present invention.

The central processing computer can service any number of merchants, vendors, and/or providers, and/or any of the accounts with any of the individuals, account holders, and/or account owners, associated with any of the herein-described accounts.

4

The apparatus can also include one or more merchant communication devices or computers which can be associated with any of the herein-described merchants, vendors, and/or providers, who or which utilize the present invention.

The apparatus can also include one or more information provider communication devices or computers. The information provider computer can be associated with a credit card issuer, a credit account administrator, a charge card issuer, a charge account administrator, a debit card issuer, a debit account administrator, an electronic money account administrator, a checking account administrator, a bank, a financial institution, any entity which facilitates, manages, operates, and/or administers, any of the herein-described accounts, a merchant, a vendor, a provider, a credit rating agency or service, and/or any other entity which can provide information regarding any transaction history information, account history information, and/or charge-back information, and/or any information related thereto, for, or regarding, any of the individuals or entities described herein as engaging in transactions with any of the herein-described merchants, vendors, and/or providers.

Any number of central processing computers, merchant computers, and/or information provider computers, can be utilized in conjunction with the present invention.

The central processing computers, the merchant computers, and/or the information provider computers, can communicate with, transmit information to, and/or receive information from, any other central processing computers, merchant computers, and/or the information provider computers, over any suitable communication network or system, including, but not limited to a telephone network, a telecommunication network, a digital communication network, a satellite communication network, a wireless communication network, a personal communication services network, a broadband communication network, a bluetooth communication network, the Internet, the World Wide Web, and/or any other communication network and/or system.

The present invention can be utilized on, over, and/or in conjunction with, any suitable communication network or system, including, but not limited to a telephone network, a telecommunication network, a digital communication network, a satellite communication network, a wireless communication network, a personal communication services network, a broadband communication network, a bluetooth communication network, the Internet, the World Wide Web, and/or any other communication network and/or system.

The present invention can be utilized in order to provide information to a merchant, vendor, or provider, regarding charge-backs, stopping of payments, and/or failures to make payments, which have occurred in an account of an individual or entity with whom the respective merchant, vendor, or provider, is currently engaging in a transaction. The present invention can provide detailed information to the merchant regarding the transaction and subsequent activities.

The present invention can also be utilized in order to determine whether an individual paying for a transaction by check has previously stopped payment of a check in a previous transaction. The present invention can also provide information regarding the transaction and subsequent activities. The present invention can also be utilized in order to determine whether an individual paying for a transaction with a check has previously had a check returned due to insufficient funds and/or "bounced" a check.

The present invention can also be utilized in order to provide transaction history information, account history information, and/or charge-back information, including the above-described charge-back, check stopping of payment, or

5

check bouncing, information, during a transaction authorization process, prior to an transaction authorization process, subsequent to transaction authorization process, and/or prior to a goods, products, and/or services, shipment and/or delivery.

The present invention can be utilized in order to provide information to a merchant, vendor, or provider, regarding a charge-back(s), a stopping of payment(s), and/or a non-payment(s) due to insufficient funds, which have occurred on, in conjunction with, and/or relating to, any of the herein-described accounts.

The merchant can then utilize the report information in order to determine either not to proceed with the transaction, to cancel the transaction or order, to request additional information, to request information to confirm and/or verify the transaction and the account holder's or the account owner's authority to enter into the transaction, to request additional assurances from the account holder or account owner, to secure the account holder's or the account owner's agreement not to dispute a charge or payment, to secure the account holder's or the account owner's agreement not to stop payment for a charge or payment, to secure the account holder's or the account owner's guarantee that sufficient funds exist to cover a payment, to secure the account holder's or the account owner's alternate agreement to guarantee payment for a charge, to secure a release of liability or claim from the account holder or account owner regarding the transaction, and/or the merchant can take any other action in order to protect its interests.

The present invention can be utilized in order to provide respective charge-back information, stopping of payment information, and/or non-payment due to insufficient funds information, to a merchant, vendor, or provider, at any time prior to the merchant's, the vendor's, or the provider's, delivery, transfer, or shipment, of the respective goods, products, and/or services, to an individual, entity, account holder, or account owner.

The present invention can also be utilized in conjunction with, and/or along with, a transaction authorization process.

Intelligent agents, software agents, mobile agents, and/or related technologies, can also be utilized in conjunction with the present invention. The respective intelligent agent(s), software agent(s), mobile agent(s), can be programmed and/or designed to act on behalf of any of the respective merchants, vendors, or providers, described herein as utilizing the present invention, so as to act on behalf of the respective merchants, vendors, or providers, as well as to perform any of processing functions and/or other functions described herein.

The present invention can also be programmed to be self-activating and/or activated automatically.

Accordingly, it is an object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized by a merchant, vendor, or other entity, in processing, and/or in assessing the processing of, a transaction.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to prevent and/or in order to reduce the incidence of any one or more of credit card fraud, credit account fraud, charge card fraud, charge

6

account fraud, debit card fraud, debit account fraud, check fraud, checking account fraud, or cyber-shoplifting.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to process information regarding fraudulent use of any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, automated teller machines, checks, or checking accounts.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to process information regarding checks returned due to insufficient funds and checks for which stop payment orders have been made.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information which can be utilized to process information regarding disputes and/or denial of payment assertions made in conjunction with any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to process information regarding past denials of liability or responsibility regarding a transaction.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to perform risk management assessments regarding a transaction.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in face-to-face transactions, non-face-to-face transactions, telephone transactions, on-line transactions, mail order transactions, or in any other transactions.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can provide information at any time during, prior to, and/or subsequent to, a transaction.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized to allow a merchant, vendor, or provider, of goods, products, and/or services, to process information regarding a counterpart or counterparty to a transaction in order to determine if the counterpart or counterparty could be a risk, could be a credit risk, or might not fulfill payment obligations relating to a transaction.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized during a transaction, during a transaction authorization process, subsequent to a transaction, subsequent to a transaction authorization process, prior to an order fulfillment process, or during an order fulfillment process.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history

7

information, account history information, and/or charge-back information, which can be utilized on, over, or on conjunction with, any communication network or system.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized on, over, or in conjunction with, any one or more of a telephone network, a telecommunication network, a digital communication network, a satellite communication network, a wireless communication network, a personal communication services network, a broadband communication network, or a bluetooth communication network.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized on, over, or in conjunction with the Internet and/or the World Wide Web.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized on, over, or in conjunction with a wireless communication network.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to provide information to a merchant, vendor, or provider, regarding charge-backs, stopping of payments, and/or failures to make payments, which have occurred in an account of an individual or entity.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can provide detailed information to a merchant regarding an account transaction or subsequent activities.

It is yet another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be utilized in order to provide transaction history information, account history information, and/or charge-back information, during a transaction authorization process, prior to a transaction authorization process, subsequent to transaction authorization process, or prior to a goods, products, and/or services, shipment or delivery.

It is another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can utilize intelligent agents, software agents, or mobile agents.

It is still another object of the present invention to provide an apparatus and method for providing transaction history information, account history information, and/or charge-back information, which can be programmed to be self-activating or activated automatically.

Other objects and advantages of the present invention will be apparent to those skilled in the art upon a review of the Description of the Preferred Embodiments taken in conjunction with the Drawings which follow.

BRIEF DESCRIPTION OF THE DRAWINGS

In the Drawings:

FIG. 1 illustrates the apparatus of the present invention, in block diagram form;

8

FIG. 2 illustrates the central processing computer of FIG. 1, in block diagram form;

FIG. 3 illustrates a preferred embodiment method for utilizing the apparatus of FIG. 1, in flow diagram form;

FIG. 4 illustrates another preferred embodiment method for utilizing the apparatus of FIG. 1, in flow diagram form; and

FIGS. 5A and 5B illustrate another preferred embodiment method for utilizing the apparatus of FIG. 1, in flow diagram form.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

The present invention pertains to an apparatus and method for providing transaction history information, account history information, and/or charge-back information and, in particular, to an apparatus and method for providing transaction history information, account history information, and/or charge-back information which can be utilized by a merchant, vendor, or other entity, in processing, and/or in assessing the processing of, a transaction in order to prevent and/or in order to reduce the incidence of any one or more of credit card fraud, credit account fraud, charge card fraud, charge account fraud, debit card fraud, debit account fraud, check fraud, checking account fraud, and/or cyber-shoplifting.

The apparatus and method of the present invention can be utilized to in order to process information regarding fraudulent use of any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts. The apparatus and method of the present invention can also be utilized to in order to process information regarding checks returned due to insufficient funds, checks for which stop payment orders have been made, disputes and/or denial of payment assertions made in conjunction with any one or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking accounts.

The apparatus and method of the present invention can also process information regarding past denials of liability or responsibility regarding a transaction, past charge-back activity involving any one or more of a credit card, a credit account, a charge card, a charge account, a debit card, a debit account, or a checking account.

The information obtained from the apparatus and method of the present invention can also be utilized by a merchant, a vendor, and/or any other entity, in order to process a transaction, and/or in order to assess whether or not it should fulfill an order relating to a transaction. For example, a merchant can obtain information regarding a purchaser's history of utilizing a credit card in an on-line transaction, receiving the goods which were to the subject of a transaction and, thereafter, disputing the corresponding credit card charge and/or denying having ever made the transaction. In this manner, the merchant can utilize the information in order to assess whether or not to fulfill a transaction and/or to cancel the transaction and possibly avoid a charge-back being imposed upon it and the losses relating thereto which can include the loss of the goods, the payment for the goods, a "charge-back" fee, and/or any other charges or costs which can be associated with the charge-back.

The apparatus and method of the present invention can also be utilized in order to perform risk management in transactions involving payment by any or more of credit cards, credit accounts, charge cards, charge accounts, debit cards, debit accounts, electronic money accounts, checks, or checking

accounts. The apparatus and method of the present invention can also be utilized in face-to-face transactions, non-face-to-face transactions, telephone transactions, on-line transactions, mail order transactions, and/or in any other non-cash transactions.

The apparatus and method of the present invention can be utilized in order to provide information at any time during, prior to, and/or subsequent to, a transaction. The apparatus and method of the present invention can be utilized by a merchant, vendor, or other entity, in order to assess an individual's or an entity's past transaction history, account history, or charge-back history, in order to determine if the individual or entity has had a history of, or could be a risk in, denying being party to a transaction involving a credit card, a credit account, a charge card, a charge account, a debit card, a debit account, or a checking account, disputing a transaction involving credit card, a credit account, a charge card, a charge account, a debit card, a debit account, passing or attempting to pass a bad check, stopping payment of an issued check, and/or in other ways attempting to defraud or otherwise obtain goods, products, or services, without paying for same, shopping same, and/or cyber-shoplifting same.

The apparatus and method of the present invention can be utilized in order to allow a merchant, vendor, or provider, of goods, products, and/or services, to process information regarding a counterpart or counterparty to a transaction in order to determine if the counterpart or counterparty could be a risk, could be a credit risk, or might not fulfill payment obligations relating to a transaction.

For example, a merchant, by obtaining information regarding an individual's credit card or charge card purchasing history can utilize the apparatus and method of the present invention in order to ascertain that an individual has, in the past, repudiated and/or denied making an on-line credit card purchase or charge card purchase, while all the while, the individual or a family member had, in fact, made the purchase and received a good or product, and causing a charge-back to be imposed on the merchant along with the non-return of the respective good or product, as well as causing the merchant to absorb any fees or costs associated with the charge-back, the transaction and/or the order fulfillment process. In a similar manner, a merchant can ascertain that an individual has, in the past, paid for goods, products, or services, with a check which is subsequently refused payment due to insufficient funds and/or for a check which the individual has subsequently issued a stop payment order.

In these instances, the apparatus and method of the present invention, by providing the merchant with information regarding transaction history information, account history information, and/or charge-back information, can allow the merchant to take any necessary precautions and/or steps in order to minimize its risk of loss in transactions with individuals.

As defined herein, the terms "user," "merchant," "vendor," "provider," or the plural of same, refer to any merchant, merchants, vendor, vendors, provider, and/or providers, of any goods, products, or services, who or which utilize the apparatus and method of the present invention in order to obtain and/or utilize the information provided thereby.

As defined herein, the term "account," "credit card account," "charge card account," "debit card account," "electronic money account," or "checking account," or the plural of same, refer to any of the respective accounts or accounts which can be utilized by an individual and/or entity in order to engage in a transaction with any of the herein-defined merchants, vendors, and/or providers.

As defined herein, the terms "operator" or "administrator", or the plural of same, refer to any operators or administrators who or which operate and/or administer the operation of the apparatus of the present invention and/or any of the central processing computer utilized in conjunction with same.

The apparatus and method of the present invention can provide transaction history information, account history information, and/or charge-back information, any one or more of during a transaction, during a transaction authorization process, subsequent to a transaction, subsequent to a transaction authorization process, prior to an order fulfillment process, and/or during an order fulfillment process.

The apparatus and method of the present invention can also process information received, concerning any of the herein-described individuals or entities, from any one of more of credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, and/or any banks and/or financial institutions and/or other entities which facilitate, manage, operate, and/or administer, any of the herein-described accounts.

The apparatus and method of the present invention can process information received, concerning any of the herein-described individuals or entities, from any merchants, vendors, and/or providers of goods, products, and/or services, credit agencies, and/or any other individual, individuals, entity, and/or entities.

Applicant hereby incorporates by reference herein the subject matter and teachings of U.S. Provisional Patent Application Ser. No. 60/262,167 which teaches and discloses an apparatus and method for providing transaction history information, account history information, and/or charge-back information.

FIG. 1 illustrates a preferred embodiment of the apparatus of the present invention which is designated generally by the reference numeral 100, in block diagram form. With reference to FIG. 1, the apparatus 100 includes a central processing computer 10.

The central processing computer 10 can perform any of the herein-described processing routines and/or processing operations, as well as any of the communication operations described herein as being provided by the apparatus 100 and/or the central processing computer 10.

The central processing computer 10 can be a stand-alone computer, computer system, and/or group of computers, which can be dedicated to performing the processing routines and functionality of the central processing computer, and/or can be, can be linked to, and/or can be integrated with, a credit card account authorization computer, a credit card account issuer computer, a credit account authorization computer, a credit card account administration computer, a credit account administration computer, a charge card account authorization computer, a charge card account issuer computer, a charge account authorization computer, a charge card account administration computer, a charge account administration computer, a debit card account authorization computer, a debit card account issuer computer, a debit account authorization computer, a debit card account administration computer, a debit account administration computer, an electronic money account authorization computer, an electronic money account issuer computer, an electronic money account administration computer, a checking account computer, a checking account administration computer, a checking account issuer computer, a bank computer, a financial institution computer, and/or any other computer or computer sys-

11

tem which can be utilized in order to process information, to process transactions, and/or the service, any of the herein-described accounts.

The central processing computer **10** can process and/or provide any of the information described herein as being provided by the apparatus **100** and/or can perform any of the processing routines described herein as being performed by the apparatus **100**.

The central processing computer **10** can be a computer, a computer system, a network computer, a server computer, and/or a communication device, and/or any combination of same.

The central processing computer **10** can service any number of the herein-described merchants, vendors, and/or providers, and/or any of the accounts with any of the individuals, account holders, and/or account owners, associated with any of the herein-described accounts.

The central processing computer **10** can include any number of central processing computers. Any number of central processing computers **10** can be utilized in conjunction with the apparatus **100**.

With reference once again to FIG. 1, the apparatus **100** can also include one or more merchant communication devices or computers **20** (hereinafter referred to as “merchant computer **20**” or “merchant computers **20**”) which can be associated with any of the herein-described merchants, vendors, and/or providers, who or which utilize the apparatus **100**. A merchant, vendor, or provider, can also have multiple merchant computers **20** associated therewith.

Any of the herein-described merchant computers can be, can be linked with, and/or can be integrated with, a credit card account authorization device, a credit account authorization device, a charge card account authorization device, a charge account authorization device, a debit card account authorization device, a debit account authorization device, an electronic money account authorization device, an automated teller machine (ATM), a checking account authorization device, and/or a bank and/or financial institution device or computer.

Any number of merchant computers **20** can be utilized in conjunction with the apparatus **100**.

The merchant computer **20** can transmit information to as well as receive information from the central processing computer(s) **10**.

The merchant computer **20** can be any one or more of a device, an account authorization device, a computer, a computer system, a group of computers, a telephone, a personal computer, a wireless telephone, a personal digital assistant, a video telephone, a personal communication device, a wireless device, a handheld device, a palm-top device, and/or any other communication device(s) and/or computer(s).

With reference once again to FIG. 1, the apparatus **100** can also include one or more information provider communication devices or computers **30** (hereinafter referred to as “information provider computer **30**” or “information provider computers **30**”).

The information provider computer **30** can be associated with a credit card issuer, a credit account administrator, a charge card issuer, a charge account administrator, a debit card issuer, a debit account administrator, an electronic money account administrator, a checking account administrator, a bank, a financial institution, any entity which facilitates, manages, operates, and/or administers, any of the herein-described accounts, a merchant, a vendor, a provider, a credit rating agency or service, and/or any other entity which can provide information regarding any transaction history information, account history information, and/or charge-

12

back information, and/or any information related thereto, for, or regarding, any of the individuals or entities described herein as engaging in transactions with any of the herein-described merchants, vendors, and/or providers.

The information provider computer **30** can transmit information to as well as receive information from the central processing computer(s) **10**. In the preferred embodiment, any of the herein-described credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, can access the central processing computer **10** at any time via its respective information provider computer **30** and transmit and/or provide, to the central processing computer **10**, any of the herein-described transaction history information, account history information, and/or charge-back information, and/or any information related thereto, for, or regarding, any of the individuals or entities described herein as engaging in transactions with any of the herein-described merchants, vendors, and/or providers.

The information provider computer **30** can be any one or more a computer, a computer system, and/or a group of computers. Any number of information provider computers **30** can be utilized in conjunction with the apparatus **100**.

The information provider computer **30** can be any one or more of a device, an account authorization device, a computer, a computer system, a group of computers, a telephone, a personal computer, a wireless telephone, a personal digital assistant, a video telephone, a personal communication device, a wireless device, a handheld device, a palm-top device, and/or any other communication device(s) and/or computer(s).

Any number of central processing computers **10**, merchant computers **20**, and/or information provider computers **30**, can be utilized in conjunction with the present invention.

The central processing computers **10**, the merchant computers **20**, and/or the information provider computers **30**, can communicate with, transmit information to, and/or receive information from, any other central processing computers **10**, merchant computers **20**, and/or the information provider computers **30**, over any suitable communication network or system, including, but not limited to a telephone network, a telecommunication network, a digital communication network, a satellite communication network, a wireless communication network, a personal communication services network, a broadband communication network, a bluetooth communication network, the Internet, the World Wide Web, and/or any other communication network and/or system.

The apparatus **100** can be utilized on, over, and/or in conjunction with, any suitable communication network or system, including, but not limited to a telephone network, a telecommunication network, a digital communication network, a satellite communication network, a wireless communication network, a personal communication services network, a broadband communication network, a bluetooth communication network, the Internet, the World Wide Web, and/or any other communication network and/or system.

Any of the central processing computers **10**, The merchant computers **20**, and/or the information provider computers **30**, can include, where appropriate and/or where suitable, a central processing unit (CPU), a random access memory (RAM), a read only memory (ROM), an input device, a display device, a receiver, a transmitter, a database, and an output device.

FIG. 2 illustrates the central processing computer **10** of FIG. 1, in block diagram form. With reference to FIG. 2, the

13

central processing computer 10 includes a central processing unit or CPU 10A, which in the preferred embodiment, is a microprocessor. The CPU 10A may also be a microcomputer, a minicomputer, a macro-computer, and/or a mainframe computer, depending upon the application.

The central processing computer 10 also includes a random access memory device(s) 10B (RAM) and a read only memory device(s) 10C (ROM), each of which is connected to the CPU 10A, a user input device 10D, for entering data and/or commands into the central processing computer 10, which includes any one or more of a keyboard, a scanner, a user pointing device, such as, for example, a mouse, a touch pad, and/or an audio input device and/or a video input device, etc., if desired, which input device(s) is also connected to the CPU 10A. The central processing computer 10 also includes a display device 10E for displaying data and/or information to a user or operator.

The central processing computer 10 also includes a transmitter(s) 10F, for transmitting signals and/or data and/or information to any one or more of the central processing computers 10, the merchant computers 20, and/or the information provider computers 30, which may be utilized in conjunction with the present invention.

The central processing computer 10 also includes a receiver 10G, for receiving signals and/or data and/or information from any one or more of the central processing computer(s) 10, the merchant computers 20, and/or the information provider computers 30, which may be utilized in conjunction with the present invention.

With reference to FIG. 2, the central processing computer 10 also includes a database 10H. The database 10H can contain any data, information, software programs, software algorithms, and/or any other information needed and/or desired for performing any of the processing routines and/or functionality described herein as being performed by the central processing computer(s) 10 and/or by the apparatus 100.

The database 10H can also include any data and/or information needed and/or desired for performing any of the processing routines and/or functionality described herein as being performed by any of the merchant computers 20, and/or the information provider computers 30, described herein.

The database 10H can contain data and/or information regarding any of the individuals, entities, account holders, and/or account owners, of any of the credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, and checking accounts, described herein. The database 10H can also include contact information for any of the individuals, entities, account holders, account owners, including, but not limited to, name(s), address or addresses, mailing address or mailing addresses, telephone number(s), facsimile number(s), e-mail address or e-mail addresses, uniform resource locator (URL) or URLs, contact information, and/or contact name(s).

The database 10H can also contain, for each account, and/or for each type of account, the account number, information regarding transactions which have occurred on the account, information regarding counterparts or counterparties to transactions on the account, information regarding account payments, information regarding account payment history, information regarding transactions denials made by respective individuals, entities, account holders, and/or account owners, information regarding disputes involving or regarding transactions involving credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding fraudulent use, and/or

14

alleged fraudulent use, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding fraudulent transactions, and/or alleged fraudulent transactions, on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding the non-providing, and/or the alleged non-providing, of goods, products, and/or services, in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding the charging-back of payment(s) in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, the number of charge-backs on an account, the types of transactions involved in a charge-back, the amount of transactions involved a charge-back, the type of goods, products, and/or services, involved in a charge-back, the merchants, vendors, or providers, involved in a charge-back, the accounts, individuals, entities, account holders, and/or account owners, involved in a charge-back, the account or account involved in a charge-back, probability and/or statistical information regarding the likelihood that an account, a transaction, an individual, an entity, an account holder, and/or an account owner, can or may be involved in a charge-back, information regarding the stopping of payment in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, the number of stopping of payments on an account, the types of transactions involved in a stopping of payment, the amount of transactions involved a stopping of payment, the type of goods, products, and/or services, involved in a stopping of payment, the merchants, vendors, or providers, involved in a stopping of payment, the accounts, individuals, entities, account holders, and/or account owners, involved in a stopping of payment, the account or account involved in a stopping of payment, probability and/or statistical information regarding the likelihood that an account, a transaction, an individual, an entity, an account holder, and/or an account owner, can or may be involved in a stopping of payment, and/or any other related information.

The database 10H can contain data and/or information regarding any of the herein-described merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers. The database 10H can also include contact information for any of the herein-described merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers, including, but not limited to, name(s), address or addresses, mailing address or mailing addresses, telephone number(s), facsimile number(s), e-mail address or e-mail addresses, uniform resource locator (URL) or URLs, contact information, and/or contact name(s).

15

The database 10H can also contain information regarding accounts, financial accounts, transaction accounts, and/or non-financial accounts, for, or associated with, any of the herein-described merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers.

The database 10H can also contain, for each of the accounts, and/or for each type of account, for or associated with the respective merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers, the account number, information regarding transactions which have occurred on the account, information regarding counterparts or counterparties to transactions on the account, information regarding account payments, information regarding account billing collection, information regarding account payment history, information regarding account bill collection history, information regarding transactions denials made by respective individuals, entities, account holders, and/or account owners, information regarding disputes involving or regarding transactions involving credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding fraudulent use, and/or alleged fraudulent use, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding fraudulent transactions, and/or alleged fraudulent transactions, on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding the non-providing, and/or the alleged non-providing, of goods, products, and/or services, in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, information regarding the charging-back of payment(s) in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, the number of charge-backs on an account, the types of transactions involved in a charge-back, the amount of transactions involved a charge-back, the type of goods, products, and/or services, involved in a charge-back, the accounts, merchants, vendors, or providers, involved in a charge-back, the accounts, individuals, entities, account holders, and/or account owners, involved in a charge-back, the account or account involved in a charge-back, probability and/or statistical information regarding the likelihood that an account, a transaction, an individual, an entity, an account holder, and/or an account owner, can or may be involved in a charge-back, information regarding the stopping of payment in a transaction(s), on or involving, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, electronic money accounts, checking accounts, the number of stopping of payments on an account,

16

the types of transactions involved in a stopping of payment, the amount of transactions involved a stopping of payment, the type of goods, products, and/or services, involved in a stopping of payment, the accounts, merchants, vendors, or providers, involved in a stopping of payment, the individuals, entities, account holders, and/or account owners, involved in a stopping of payment, the account or account involved in a stopping of payment, probability and/or statistical information regarding the likelihood that an account, a transaction, an individual, an entity, an account holder, and/or an account owner, can or may be involved in a stopping of payment, and/or any other related information.

The database 10H can also include information regarding resolution of disputes, resolution of transactions denials, resolution of allege fraudulent use of account accusations, resolution of charge-backs, resolution of stopping of payments, and/or any other information for, or regarding, any of the herein-described accounts, and/or any of the individuals, entities, account holders, account owners, merchants, vendors, providers, and/or any of the credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, described herein.

The database 10H can also contain account Information any other account information, account identification information, account history information, account payment information, account non-payment information, transaction information, information regarding transaction denial, account charge-back information, account stopping of payment information, and/or any other pertinent or relevant information needed and/or desired for performing any of the processing routines and/or functionality described herein as being performed and/or as being provided by the central processing computer and/or the apparatus 100.

Any of the data and/or information described herein can be provided from multiple information sources and/or from multiple individuals or entities by utilizing any of the respective central processing computers 10, merchant computers 20, and/or information provider computers 30.

The database 10H can also contain any other information which may be relevant, pertinent, useful, and/or desired, for facilitating the operation of the apparatus and method of the present invention as described herein and/or as related thereto.

The database 10H, in the preferred embodiment, is a database which may include individual databases or collections of databases, with each database being designated to store any and all of the data and/or information described herein. Applicant hereby incorporates by reference herein the teachings of *Basic Business Statistics Concepts and Applications*, Mark L. Berenson and David M. Levine, 6th Edition, Prentice Hall 1996.

The database 10H, or collection of databases, may be updated by each of the respective users, individuals, central processing computer operators or administrators, merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers, in real-time and/or otherwise, and/or via dynamically linked database management techniques.

17

It is envisioned, in the preferred embodiment, that the database 10H, or collection of databases, can be updated upon the availability of, and/or the making available of, any information and/or information updates concerning any of the information, account information, and/or other information, described herein as being stored in the database 10H. The information stored in the database 10H can be updated by any of the herein-described users, individuals, central processing computer operators or administrators, merchants, vendors, providers, credit card issuers, credit account administrators, charge card issuers, charge account administrators, debit card issuers, debit account administrators, electronic money account administrators, checking account administrators, banks, financial institutions, any/or or entities, merchants, vendors, providers, credit rating agencies or services, credit agencies, and/or information providers, who or which can provide the information to the central processing computer 10 in any appropriate manner and/or who or which can transmit the information to the central processing computer 10 via a respective merchant computer 20, via a respective information provider computer 30, and/or via any other computer or communication device, in real-time and/or otherwise.

The data and/or information stored in the database 10H can also be updated by external sources. The database 10H will contain any and all information deemed necessary and/or desirable for providing all of the processing and/or services and/or functions described herein. Applicant hereby incorporates by reference herein the subject matter of *Fundamentals of Database Systems*, by Ramez Elmasri and Shamkant B. Navathe, 2nd Ed., Addison-Wesley Publishing Company, 1994.

With reference once again to FIG. 2, the central processing computer 10 also includes an output device 10I such as a printer, a modem, a fax/modem, or other output device, for outputting information to the operator or user of the central processing computer 10 or to a third party or third party entity.

The apparatus 100 and method of the present invention can be utilized, in a preferred embodiment, in order to provide information to a merchant, vendor, or provider, regarding charge-backs, stopping of payments, and/or failures to make payments, which have occurred in an account of an individual or entity with whom the respective merchant, vendor, or provider, is currently engaging in a transaction. For example, a merchant can obtain information indicating that a purchasing individual has, in the past, engaged in credit card charge disputing activity regarding a previous transaction which has resulted in a charge-back to the merchant involved in the previous transaction.

The apparatus 100 can provide detailed information to the merchant regarding the transaction and subsequent activities. For example, the apparatus 100 can provide the merchant with information indicating that the purchase was an on-line credit card purchase, that the purchasing individual provided certain identification and/or other information, and that the individual credit card account holder later claimed to have not made, or did not authorize the credit card purchase.

In another preferred embodiment, the apparatus 100 and method of the present invention can be utilized in order to determine whether an individual paying for a transaction by check has previously stopped payment of a check in a previous transaction. The apparatus 100 and method of the present invention can also provide information regarding the transaction and subsequent activities.

In another preferred embodiment, the apparatus 100 and method of the present invention can be utilized in order to determine whether an individual paying for a transaction with

18

a check has previously had a check returned due to insufficient funds and/or "bounced" a check.

In another preferred embodiment, the apparatus 100 and method of the present invention can be utilized in order to provide transaction history information, account history information, and/or charge-back information, including the above-described charge-back, check stopping of payment, or check bouncing, information, during a transaction authorization process, prior to an transaction authorization process, subsequent to transaction authorization process, and/or prior to a goods, products, and/or services, shipment and/or delivery.

In another preferred embodiment, the apparatus 100 and method of the present invention can be utilized in conjunction with a transaction process and/or a transaction authorization process.

FIG. 3 illustrates a preferred embodiment method for utilizing the apparatus 100 of the present invention, in flow diagram form. In the embodiment of FIG. 3, the apparatus 100 of the present invention can be utilized in order to provide information to a merchant, vendor, or provider, regarding a charge-back(s), a stopping of payment(s), and/or a non-payment(s) due to insufficient funds, which have occurred on, in conjunction with, and/or relating to, any of the herein-described accounts.

The embodiment of FIG. 3 can be utilized to provide information regarding charge-backs which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIG. 3 can also be utilized in order to provide information regarding stopping of payments which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIG. 3 can also be utilized in order to provide information regarding non-payment due to insufficient funds which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIG. 3 will be described as being utilized in order to provide information regarding charge-backs which have occurred on, in conjunction with, and/or relating to a credit card account or a charge card account. The embodiment of FIG. 3 can be utilized in a same, in a similar, and/or in an analogous manner, in order to provide any one or more of information regarding charge-backs, information regarding stopping of payments, and/or information regarding non-payment due to insufficient funds, which have occurred on, in conjunction with, and/or relating to any one or more of credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

With reference to FIG. 3, the operation of the apparatus 100 commences at step 300. At step 301, a merchant who is engaged in a transaction with an individual, who is utilizing a credit card account or a charge card account to effect payment for a transaction involving any type or kind of goods, products, and/or services, can access the central processing computer 10 via a merchant computer 20.

19

At step 301, the merchant can access the central processing computer 10 and enter information regarding the transaction and/or information regarding the credit card account or the charge card account which the individual has presented for payment, into the merchant computer 20 associated with the merchant. The information can, for example, be entered into a transaction authorization device which can be utilized as a merchant computer 20. At step 302, the information entered into the merchant computer 20, at step 301, is transmitted to the central processing computer 10.

A step 303, the central processing computer 10 will receive the information. At step 304, the central processing computer 10 will process the information received, at step 303, in conjunction with the information stored in the database 10H. At step 304, the central processing computer 10 will generate a charge-back information report.

The charge-back information report can contain any of the herein-described information which is stored in the database 10H. The charge-back information report can, for example, contain information regarding the number and frequency of charge-backs which have occurred on the respective credit card account or charge card account, the reasons for the charge-back action, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account holder or account owner can be a charge-back risk in the present transaction, and/or any other information regarding charge-back(s) which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a charge-back risk.

In the case when the apparatus 100 is utilized to provide stopping of payment information or information regarding non-payment(s) due to insufficient funds, such as in the case of check payments, debit payments, electronic money payments, and/or other payments, the central processing computer 10 will, at step 304, process the information regarding the respective transaction and information regarding the respective account in conjunction with the information stored in the database 10H and generate a respective stopping of payment information report or non-payment(s) due to insufficient funds information report.

The respective stopping of payment(s) information report or non-payment(s) due to insufficient funds information report can contain any of the herein-described information which is stored in the database 10H. The respective stopping of payment(s) information report or non-payment(s) due to insufficient funds information report can, for example, contain information regarding the number and frequency of respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, the reasons for the respective stopping of payment(s) or non-payment(s) due to insufficient funds, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account

20

holder or account owner can be a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk in the present transaction, and/or any other information regarding respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk.

At step 305, the central processing computer 10 can transmit the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable), to the merchant computer 20. The charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can also be transmitted to the merchant or to the merchant computer 20 as any one or more of an e-mail message, an instant messaging message, a short message, a beeper message, a pager message, a telephone message, a recorded voice message, and/or any other electronic message or electronic transmission.

At step 306, the merchant computer 10 can receive the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable).

At step 307, the information provided and/or contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can be displayed to the merchant or the merchant's employee or agent, can be output or printed out, and/or can otherwise be provided to the merchant or the merchant's employee or agent.

At step 308, the merchant or the merchant's employee or agent can review the information contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) and determine whether or not to proceed to engage in the transaction, to proceed to process the transaction, to proceed to consummate the transaction, or to cancel the transaction. In this manner, for example, a merchant can be apprised of past credit card or charge card disputes, denials, fraudulent use allegations, charge-back impositions, and/or cyber-shoplifting activity, which occurred on an account, which may be identified in the respective charge-back information report, or any other respective information which may be contained in the respective stopping of payment information report or non-payment(s) due to insufficient funds information report.

The merchant can then utilize the report information in order to determine either not to proceed with the transaction, to cancel the transaction or order, to request additional information, to request information to confirm and/or verify the transaction and the account holder's or the account owner's authority to enter into the transaction, to request additional assurances from the account holder or account owner, to secure the account holder's or the account owner's agreement not to dispute a charge or payment, to secure the account holder's or the account owner's agreement not to stop payment for a charge or payment, to secure the account holder's or the account owner's guarantee that sufficient funds exist to cover a payment, to secure the account holder's or the account owner's alternate agreement to guarantee payment for a charge, to secure a release of liability or claim from the

21

account holder or account owner regarding the transaction, and/or the merchant can take any other action in order to protect its interests.

Thereafter, the operation of the apparatus **100** will cease at step **309**.

In another preferred embodiment, the apparatus **100** and method of the present invention can be utilized in order to provide respective charge-back information, stopping of payment information, and/or non-payment due to insufficient funds information, to a merchant, vendor, or provider, at any time prior to the merchant's, the vendor's, or the provider's, delivery, transfer, or shipment, of the respective goods, products, and/or services, to an individual, entity, account holder, or account owner. In this regard, for example, the apparatus **100** can process and provide information to the merchant prior to the merchant's delivery, transfer, or shipment, of a good or product, to the account holder, thereby allowing the merchant to ascertain, evaluate, and/or determine, the charge-back risks, the stopping of payment risks, and/or the non-payment due to insufficient funds risks, which exist, or which may exist, in a transaction, prior to the merchant delivering, transferring, and/or shipping the good or product to the counterparty or account holder, and/or otherwise relinquishing possession of, or title to, the good or product.

In this manner, the apparatus **100** can be utilized in order to allow a merchant, vendor, or provider, to reduce charge-back or non-payment risks and/or to otherwise protect its interests.

FIG. **4** illustrates another preferred embodiment method for utilizing the apparatus **100** of the present invention, in flow diagram form. In the embodiment of FIG. **4**, the apparatus **100** of the present invention can be utilized in order to provide information to a merchant, vendor, or provider, regarding a charge-back(s), a stopping of payment(s), and/or a non-payment(s) due to insufficient funds, which have occurred on, in conjunction with, and/or relating to, any of the herein-described accounts.

The information can be provided to the merchant, vendor, or provider, at any time prior to a pre-specified time in order to allow the merchant, vendor, or provider, to receive and review the information subsequent to the transaction but prior to delivering, transferring, or shipping, the respective goods, products, or services, to a recipient pursuant to a transaction. In this manner, for example, a merchant can process a transaction, provide information regarding a shipping or delivery date and receive the requested information prior to shipping or delivering a good or product to a recipient, a customer, or account holder or account owner.

For example, a merchant who or which ships goods or products three (3) days after an order is place can be provided with transaction history information, account history information, and/or charge-back information regarding the account or the account holder or account owner prior to shipping or delivering the goods or products, thereby giving the merchant the opportunity utilize the report information in order to determine either not to proceed with the transaction, to request additional information, to request information to confirm and/or verify the transaction and the account holder's or the account owner's authority to enter into the transaction, to request additional assurances from the account holder or account owner, to secure the account holder's or the account owner's agreement not to dispute a charge or payment, to secure the account holder's or the account owner's agreement not to stop payment for a charge or payment, to secure the account holder's or the account owner's guarantee that sufficient funds exist to cover a payment, to secure the account holder's or the account owner's alternate agreement to guarantee payment for a charge, to secure a release of liability or

22

claim from the account holder or account owner regarding the transaction, and/or the merchant can take any other action in order to protect its interests.

The embodiment of FIG. **4** can also be utilized in order to provide information regarding stopping of payments which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIG. **4** can also be utilized in order to provide information regarding non-payment due to insufficient funds which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIG. **4** will be described as being utilized in order to provide information regarding charge-backs which have occurred on, in conjunction with, and/or relating to a credit card account or a charge card account. It is to be understood, however, that the embodiment of FIG. **4** can be utilized in a same, in a similar, and/or in an analogous manner, in order to provide any one or more of information regarding charge-backs, information regarding stopping of payments, and/or information regarding non-payment due to insufficient funds, which have occurred on, in conjunction with, and/or relating to any one or more of credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

With reference to FIG. **4**, the operation of the apparatus **100** commences at step **400**. At step **401**, a merchant who is engaged in a transaction with an individual, who is utilizing a credit card account or a charge card account to effect payment for a transaction involving any type or kind of goods, products, and/or services, can access the central processing computer **10** via a merchant computer **20**.

At step **401**, the merchant can access the central processing computer **10** and enter information regarding the transaction and/or information regarding the credit card account or the charge card account which the individual has presented for payment, into the merchant computer **20** associated with the merchant. The merchant can also enter information regarding its shipping, transferring, or delivery, policies, including the time period (i.e. hours, days, etc.) which typically elapses in between a merchant taking an order or processing an order and shipping, transferring, or delivering, the goods, products, or services, which are the subject of the transaction, and/or otherwise fulfilling the order or obligations under the transaction. The merchant can also enter information regarding the shipping, transferring, and/or delivery, date and/or time. The merchant can also enter a time limit or time period for receiving the report.

The information can, for example, be entered into a transaction authorization device which can be utilized as a merchant computer **20**. At step **402**, the information entered into the merchant computer **20**, at step **401**, is transmitted to the central processing computer **10**.

A step **403**, the central processing computer **10** will receive the information. At step **404**, the central processing computer **10** will process the information received, at step **403**, in conjunction with the information stored in the database **10H**. At step **404**, the central processing computer **10** can generate the charge-back information report immediately and/or at any time prior to the time limit specified by the merchant for

23

receiving the report and/or prior to the shipping, transferring, and/or delivery, date and/or time.

If the central processing computer **10** has sufficient information for generating the charge-back information report, the central processing computer **10** can generate the charge-back information report. If the central processing computer **10** does not have all of the information for generating the charge-back information report, the central processing computer **10** can generate the charge-back information report at any time after it receives the information, but prior to the elapsing of the merchant-defined time limit or time period.

In any of the embodiments described herein, the central processing computer **10** can be programmed to check the information stored in the database **10H**, at specific and/or various time intervals, in order to determine if the needed information has been provided and/or has been made available for processing and generating the charge-back information report information.

The central processing computer **10** can generate the charge-back information report upon getting the needed information. If the needed information is not available prior to the elapsing of the time limit or time period, the central processing computer **10** can generate a charge-back information report containing any available information and provide information regarding which information is missing or is not available.

The charge-back information report can contain any of the herein-described information which is stored in the database **10H**. The charge-back information report can, for example, contain information regarding the number and frequency of charge-backs which have occurred on the respective credit card account or charge card account, the reasons for the charge-back action, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account holder or account owner can be a charge-back risk in the present transaction, and/or any other information regarding charge-back(s) which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a charge-back risk.

The charge-back information report can also contain information regarding information which is missing and/or not available at the time of report generation.

In the case when the apparatus **100** is utilized to provide stopping of payment information or information regarding non-payment(s) due to insufficient funds, such as in the case of check payments, debit payments, electronic money payments, and/or other payments, the central processing computer **10** will, at step **404**, process the information regarding the respective transaction and information regarding the respective account in conjunction with the information stored in the database **10H** and generate a respective stopping of payment information report or non-payment(s) due to insufficient funds information report.

The respective stopping of payment(s) report or non-payment(s) due to insufficient funds information report can contain any of the herein-described information which is stored in the database **10H**. The respective stopping of payment(s) information report or non-payment(s) due to insufficient funds information report can, for example, contain informa-

24

tion regarding the number and frequency of respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, the reasons for the respective stopping of payment(s) or non-payment(s) due to insufficient funds, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account holder or account owner can be a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk in the present transaction, and/or any other information regarding respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk. The respective stopping of payment(s) information report or non-payment(s) due to insufficient funds information report can also contain information regarding information which is missing and/or not available at the time of report generation.

At step **405**, the central processing computer **10** can transmit the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable), to the merchant computer **20**. The charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can also be transmitted to the merchant or to the merchant computer **20** as any one or more of an e-mail message, an instant messaging message, a short message, a beeper message, a pager message, a telephone message, a recorded voice message, and/or any other electronic message or electronic transmission.

At step **406**, the merchant computer **10** can receive the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable).

At step **407**, the information provided and/or contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can be displayed to the merchant or the merchant's employee or agent, can be output or printed out, and/or can otherwise be provided to the merchant or the merchant's employee or agent.

At step **408**, the merchant or the merchant's employee or agent can review the information contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) and determine whether or not to proceed to engage in the transaction, to proceed to process the transaction, to proceed to consummate the transaction, or to cancel the transaction. In this manner, for example, a merchant can be apprised of past credit card or charge card disputes, denials, fraudulent use allegations, charge-back impositions, and/or cyber-shoplifting activity, which occurred on an account, which may be identified in the respective charge-back information report, or any other respective information which may be contained in the respec-

25

tive stopping of payment information report or non-payment (s) due to insufficient funds information report.

The merchant can then utilize the report information in order to determine either not to proceed with the transaction, to cancel the transaction or order, to request additional information, to request information to confirm and/or verify the transaction and the account holder's or the account owner's authority to enter into the transaction, to request additional assurances from the account holder or account owner, to secure the account holder's or the account owner's agreement not to dispute a charge or payment, to secure the account holder's or the account owner's agreement not to stop payment for a charge or payment, to secure the account holder's or the account owner's guarantee that sufficient funds exist to cover a payment, to secure the account holder's or the account owner's alternate agreement to guarantee payment for a charge, to secure a release of liability or claim from the account holder or account owner regarding the transaction, and/or the merchant can take any other action in order to protect its interests, prior to shipping, transferring, or delivering, the respective goods, products, and/or services, and/or otherwise fulfill the order or merchant's obligations relating to the transaction.

Thereafter, the operation of the apparatus 100 will cease at step 409.

In another preferred embodiment, the apparatus and method of the present invention can be utilized in conjunction with, and/or along with, a transaction authorization process.

FIGS. 5A and 5B illustrate another preferred embodiment method for utilizing the apparatus 100 of the present invention, in flow diagram form. In the embodiment of FIGS. 5A and 5B, the apparatus 100 of the present invention can be utilized in order to provide information to a merchant, vendor, or provider, regarding a charge-back(s), a stopping of payment(s), and/or a non-payment(s) due to insufficient funds, which have occurred on, in conjunction with, and/or relating to, any of the herein-described accounts, in conjunction with, and/or in connection with a transaction authorization process.

The embodiment of FIGS. 5A and 5B can be utilized to provide information regarding charge-backs which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIGS. 5A and 5B can also be utilized in order to provide information regarding stopping of payments which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIGS. 5A and 5B can also be utilized in order to provide information regarding non-payment due to insufficient funds which have occurred on, in conjunction with, and/or relating to, credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

The embodiment of FIGS. 5A and 5B will be described as being utilized in order to provide information regarding charge-backs which have occurred on, in conjunction with, and/or relating to a credit card account or a charge card account. The embodiment of FIGS. 5A and 5B can also be utilized in a same, in a similar, and/or in an analogous manner, in order to provide any one or more of information regarding charge-backs, information regarding stopping of payments,

26

and/or information regarding non-payment due to insufficient funds, which have occurred on, in conjunction with, and/or relating to any one or more of credit card accounts, credit accounts, charge card accounts, charge accounts, debit card accounts, debit accounts, checking accounts, bank accounts, automated teller machine accounts, and/or other accounts.

With reference to FIGS. 5A and 5B, the operation of the apparatus 100 commences at step 500. At step 501, a merchant who is engaged in a transaction with an individual, who is utilizing a credit card account or a charge card account to effect payment for a transaction involving any type or kind of goods, products, and/or services, can access the central processing computer 10 via a merchant computer 20.

At step 501, the merchant can access the central processing computer 10 and enter information regarding the transaction and/or information regarding the credit card account or the charge card account which the individual has presented for payment, into the merchant computer 20 associated with the merchant. The information can, for example, be entered into a transaction authorization device which can be utilized as a merchant computer 20. At step 502, the information entered into the merchant computer 20, at step 501, is transmitted to the central processing computer 10.

A step 503, the central processing computer 10 will receive the information. At step 504, the central processing computer 10 will process the information received, at step 503, and determine if the transaction is authorized. At step 504, the central processing computer 10 will generate a transaction authorization report and transmit same to the merchant computer 20 for review by the merchant. The transaction authorization report can also be transmitted to the merchant or to the merchant computer 20 as any one or more of an e-mail message, an instant messaging message, a short message, a beeper message, a pager message, a telephone message, a recorded voice message, and/or any other electronic message or electronic transmission.

The transaction authorization report can contain information regarding whether the transaction is authorized or that the transaction is not authorized.

At step 505, the central processing computer 10 will determine whether the transaction is authorized. If, at step 505, the central processing computer 10 determines that the transaction is authorized, the operation of the central processing computer 10 will proceed to step 506. If, however, the central processing computer 10 determines, at step 505, that the transaction is not authorized, the operation of the central processing computer 10 will cease at step 512.

At step 506, the central processing computer 10 will process the information received, at step 503, in conjunction with the information stored in the database 10H. At step 506, the central processing computer 10 will generate a charge-back information report.

The charge-back information report can contain any of the herein-described information which is stored in the database 10H. The charge-back information report can, for example, contain information regarding the number and frequency of charge-backs which have occurred on the respective credit card account or charge card account, the reasons for the charge-back action, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account holder or account

owner can be a charge-back risk in the present transaction, and/or any other information regarding charge-back(s) which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a charge-back risk.

In the case when the apparatus **100** is utilized to provide stopping of payment information or information regarding non-payment(s) due to insufficient funds, such as in the case of check payments, debit payments, electronic money payments, and/or other payments, the central processing computer **10** will, at step **506**, process the information regarding the respective transaction and information regarding the respective account in conjunction with the information stored in the database **10H** and generate a respective stopping of payment information report or non-payment(s) due to insufficient funds information report.

The respective stopping of payment(s) report or non-payment(s) due to insufficient funds information report can contain any of the herein-described information which is stored in the database **10H**. The respective stopping of payment(s) report or non-payment(s) due to insufficient funds information report can, for example, contain information regarding the number and frequency of respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, the reasons for the respective stopping of payment(s) or non-payment(s) due to insufficient funds, allegations made by the account holder or account owner, dispute allegations made by the account holder or account owner, allegations of fraudulent or unauthorized account activity made by the account holder or account owner, the basis for any of the above-described allegations, allegations or responses made by the merchants, vendors, or providers, involved in the transactions in question, transactions amounts involved, probability or statistical information regarding whether the account holder or account owner can be a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk in the present transaction, and/or any other information regarding respective stopping of payment(s) or non-payment(s) due to insufficient funds which have occurred on the respective account, which can or which may be useful to and/or of interest to a merchant, vendor, or provider, in assessing whether or not the present transaction may present a respective stopping of payment(s) risk or non-payment(s) due to insufficient funds risk.

At step **507**, the central processing computer **10** can transmit the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable), to the merchant computer **20**.

The charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can also be transmitted to the merchant or to the merchant computer **20** as any one or more of an e-mail message, an instant messaging message, a short message, a beeper message, a pager message, a telephone message, a recorded voice message, and/or any other electronic message or electronic transmission.

At step **508**, the merchant computer **10** can receive the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable).

At step **509**, the information provided and/or contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) can be

displayed to the merchant or the merchant's employee or agent, can be output or printed out, and/or can otherwise be provided to the merchant or the merchant's employee or agent.

At step **510**, the merchant or the merchant's employee or agent can review the information contained in the charge-back information report (or the respective stopping of payment information report or non-payment(s) due to insufficient funds information report, if applicable) and determine whether or not to proceed to engage in the transaction, to proceed to process the transaction, to proceed to consummate the transaction, or to cancel the transaction. In this manner, for example, a merchant can be apprised of past credit card or charge card disputes, denials, fraudulent use allegations, charge-back impositions, and/or cyber-shoplifting activity, which occurred on an account, which may be identified in the respective charge-back information report, or any other respective information which may be contained in the respective stopping of payment information report or non-payment(s) due to insufficient funds information report.

The merchant can then utilize the report information in order to determine either not to proceed with the transaction, to cancel the transaction or order, to request additional information, to request information to confirm and/or verify the transaction and the account holder's or the account owner's authority to enter into the transaction, to request additional assurances from the account holder or account owner, to secure the account holder's or the account owner's agreement not to dispute a charge or payment, to secure the account holder's or the account owner's agreement not to stop payment for a charge or payment, to secure the account holder's or the account owner's guarantee that sufficient funds exist to cover a payment, to secure the account holder's or the account owner's alternate agreement to guarantee payment for a charge, to secure a release of liability or claim from the account holder or account owner regarding the transaction, and/or the merchant can take any other action in order to protect its interests.

Thereafter, the operation of the apparatus **100** will cease at step **511**.

In another preferred embodiment, the apparatus **100** of FIGS. **5A** and **5B**, can be utilized in order to provide respective charge-back information, stopping of payment information, and/or non-payment due to insufficient funds information, to a merchant, vendor, or provider, at any time prior to the merchant's, the vendor's, or the provider's, delivery, transfer, or shipment, of the respective goods, products, and/or services, to an individual, entity, account holder, or account owner. In this regard, for example, the apparatus **100** can process and provide information to the merchant prior to the merchant's delivery, transfer, or shipment, of a good or product, to the account holder, thereby allowing the merchant to ascertain, evaluate, and/or determine, the charge-back risks, the stopping of payment risks, and/or the non-payment due to insufficient funds risks, which exist, or which may exist, in a transaction, prior to the merchant delivering, transferring, and/or shipping the good or product to the counterparty or account holder, and/or otherwise relinquishing possession of, or title to, the good or product. In this manner, the apparatus **100** of FIGS. **5A** and **5B** can be utilized in order to allow a merchant, vendor, or provider, to reduce charge-back or non-payment risks and/or to otherwise protect its interests.

In another preferred embodiment, as well as in any of the embodiments described herein, intelligent agents, software agents, mobile agents, and/or related technologies, can be utilized in conjunction with the present invention. The respective intelligent agent(s), software agent(s), mobile agent(s),

(hereinafter referred to collectively as "intelligent agent" or "intelligent agents") can be programmed and/or designed to act on behalf of any of the respective merchants, vendors, or providers, described herein as utilizing the apparatus 100 of the present invention, so as to act on behalf of the respective merchants, vendors, or providers, as well as to perform any of processing functions and/or other functions described herein.

The intelligent agent can act on behalf of the respective merchants, vendors, or providers, in various activities which are described as being performed herein and/or which may be incidental and/or related thereto. Therefore, the present invention also provides an agent-based apparatus and method for providing transaction history information, account history information, and/or charge-back information.

Applicant hereby incorporates by reference herein the subject matter of the *Agent Sourcebook, A Complete Guide to Desktop Internet and Intranet Agents*, by Alper Caglayan and Colin Harrison, Wiley Computer Publishing, 1997. Applicant also incorporates by reference herein the subject matter of *Cool Intelligent Agents For The Net*, by Leslie L. Lesnick with Ralph E. Moore, IDG Books Worldwide, Inc. 1997.

The apparatus of the present invention, in any and/or all of the embodiments described herein, can also be programmed to be self-activating and/or activated automatically.

While the present invention has been described and illustrated in various preferred and alternate embodiments, such descriptions are merely illustrative of the present invention and are not to be construed to be limitations thereof. In this regard, the present invention encompasses all modifications, variations, and/or alternate embodiments, with the scope of the present invention being limited only by the claims which follow.

What is claimed is:

1. A computer-implemented method, comprising:
 - receiving information regarding a transaction involving an account, wherein the information regarding the transaction is received by a receiver prior to a processing, a completion, a consummation, or a cancellation, of the transaction;
 - processing the information regarding the transaction with a processing device using information regarding the account;
 - generating a report or a message in response to the processing of the information regarding the transaction, wherein the report or the message contains information regarding a charge-back regarding a previous transaction involving the account; and
 - transmitting the report or the message to a communication device associated with a merchant, vendor, or provider, of a good, product, or service.
2. The computer-implemented method of claim 1, wherein the communication device is a transaction authorization device.
3. The computer-implemented method of claim 1, wherein the communication device is a wireless device, a wireless telephone, or a personal digital assistant.
4. The computer-implemented method of claim 1, wherein the report or the message is transmitted to the communication device via, on, or over, the Internet or the World Wide Web.
5. The computer-implemented method of claim 1, further comprising:
 - determining whether the transaction is authorized or not authorized;
 - generating a second report or the second message containing information regarding whether the transaction is authorized or not authorized; and

transmitting the second report or the second message to the communication device.

6. The computer-implemented method of claim 1, wherein the account is a credit account, a credit card account, a charge account, or a charge card account.

7. The computer-implemented method of claim 1, wherein the account is a debit account or a debit card account.

8. The computer-implemented method of claim 1, wherein the account is a checking account or a bank account.

9. The computer-implemented method of claim 1, wherein the account is an electronic money account.

10. The computer-implemented method of claim 1, wherein the information regarding the transaction includes information regarding a time period or a time limit relating to, or a time of, a shipment, transfer, or delivery, of a good, product, or service, pursuant to the transaction, and further wherein the report or the message is transmitted to the communication device prior to the shipment, transfer, or delivery, of the good, product, or service.

11. The computer-implemented method of claim 1, wherein the report or the message is transmitted to the communication device prior to a shipment, transfer, or delivery, of a good, product, or service, or the report or the message is transmitted to the communication device prior to a processing, a completion, a consummation, or a cancellation, of the transaction.

12. The computer-implemented method of claim 1, wherein the report or the message is transmitted to the communication device pursuant to, in, or during, a transaction authorization process.

13. The computer-implemented method of claim 1, wherein the transaction is an on-line transaction, and further wherein the information regarding the transaction, or the report or the message, is transmitted via, on, or over, the Internet or the World Wide Web.

14. The computer-implemented method of claim 1, wherein the transaction is a face-to-face transaction.

15. The computer-implemented method of claim 1, wherein the report or the message contains information regarding a number or a frequency of charge-backs which have occurred on the account or contains information regarding a number or a frequency of stopping of payments or non-payments due to insufficient funds, or the report or the message contains information regarding a reason for a charge-back action, a stopping of payment action, or a non-payment due to insufficient funds action, or the report or the message contains information regarding an allegation or a dispute allegation made by an account holder associated with the account, or the report or the message contains information regarding an allegation of a fraudulent or an unauthorized account activity made by an account holder associated with the account, or the report or the message contains information regarding an allegation or a response made by a merchant, vendor, or provider, involved in a transaction dispute, or the report or the message contains information regarding a probability or a statistic regarding whether an account holder associated with the account can be a charge-back risk in the transaction or whether the account holder can be a stopping of payment risk or a non-payment due to insufficient funds risk.

16. The computer-implemented method of claim 1, wherein the transaction is a telephone transaction or an on-line transaction.

17. The computer-implemented method of claim 1, wherein the transaction is a mail order transaction.

18. The computer-implemented method of claim 1, further comprising:

31

processing information regarding a second transaction involving the account or a second transaction involving a second account;

generating a second report or a second message, wherein the second report or the second message contains information regarding a stopping of a payment regarding or involving the account or regarding or involving the second account, or information regarding a non-payment due to insufficient funds regarding or involving the account or regarding or involving the second account; and

transmitting the second report or the second message to the communication device or to a second communication device.

19. A computer-implemented method, comprising:

receiving information regarding a transaction involving an account, wherein the transaction involves a credit account, a credit card account, a charge account, a charge card account, a debit account, a debit card account, an electronic money account, a checking account, or a bank account, wherein the information regarding the transaction is received by a receiver prior to a processing, a completion, a consummation, or a cancellation, of the transaction, and further wherein the information regarding the transaction includes information regarding a time period, a time limit, or a time of, a shipment, transfer, or delivery, of a good, product, or service, pursuant to the transaction;

processing the information regarding the transaction with a processing device using information regarding the account;

generating a report or a message, wherein the report or the message contains information regarding a charge-back regarding a previous transaction involving the account; and

transmitting the report or the message to a communication device associated with a merchant, vendor, or provider, of the good, product, or service, wherein the report or the message is transmitted to the communication device prior to the shipment, transfer, or delivery, of the good, product, or service.

20. A computer-implemented method, comprising:

receiving information regarding a transaction involving an account, wherein the information regarding the transaction is received by a receiver prior to a processing, a completion, a consummation, or a cancellation, of the transaction;

processing the information regarding the transaction with a processing device using information regarding the account;

determining whether or not the transaction is authorized or not authorized and, if the transaction is authorized, generating a report or a message in response to the processing of the information regarding the transaction, wherein the report or the message contains information regarding a charge-back regarding a previous transaction involving the account; and

transmitting the report or the message to a communication device associated with a merchant, vendor, or provider, of a good, product, or service.

21. The computer-implemented method of claim 20, wherein the account is a credit account, a credit card account, a charge account, or a charge card account.

22. The computer-implemented method of claim 20, wherein the account is a debit account, a debit card account, a checking account, a bank account, or an electronic money account.

32

23. The computer-implemented method of claim 20, wherein the communication device is a wireless device, a wireless telephone, or a personal digital assistant.

24. The computer-implemented method of claim 20, wherein the information regarding the transaction includes information regarding a time period or a time limit relating to, or a time of, a shipment, transfer, or delivery, of a good, product, or service, pursuant to the transaction, and further wherein the report or the message is transmitted to the communication device prior to the shipment, transfer, or delivery, of the good, product, or service.

25. The computer-implemented method of claim 20, wherein the report or the message is transmitted to the communication device prior to a shipment, transfer, or delivery, at a good, product, or service, or the report or the message is transmitted to the communication device prior to a processing, a completion, a consummation, or a cancellation, of the transaction.

26. The computer-implemented method of claim 20, wherein the transaction is a mail order transaction, a telephone transaction, or an on-line transaction.

27. The computer-implemented method of claim 20, wherein the transaction is a face-to-face transaction.

28. The computer-implemented method of claim 20, wherein the communication device is a transaction authorization device.

29. The computer-implemented method of claim 20, wherein the report or the message contains information regarding a number or a frequency of charge-backs which have occurred on the account or contains information regarding a number or a frequency of stopping of payments or non-payments due to insufficient funds, or the report or the message contains information regarding a reason for a charge-back action, a stopping of payment action, or a non-payment due to insufficient funds action, or the report or the message contains information regarding an allegation or a dispute allegation made by an account holder associated with the account, or the report or the message contains information regarding an allegation of a fraudulent or an unauthorized account activity made by an account holder associated with the account, or the report or the message contains information regarding an allegation or a response made by a merchant, vendor, or provider, involved in a transaction dispute, or the report or the message contains information regarding a probability or a statistic regarding whether an account holder associated with the account can be a charge-back risk in the transaction or whether the account holder can be a stopping of payment risk or a non-payment due to insufficient funds risk.

30. The computer-implemented method of claim 20, further comprising:

processing information regarding a second transaction involving the account or a second transaction involving a second account;

generating a second report or a second message, wherein the second report or the second message contains information regarding a stopping of a payment regarding or involving the account or regarding or involving the second account, or information regarding a non-payment due to insufficient funds regarding or involving the account or regarding or involving the second account; and

transmitting the second report or the second message to the communication device or to a second communication device.
