

# Technologies & Sensors for the Internet of Things

**Businesses & Market Trends 2014 - 2024**

**The Internet of Things (IoT) provides big opportunities for technologies. The device business will reach \$45B in 2024, contributing to a total IoT market of \$400B.**

# Table of Contents

• <b>Executive Summary</b> .....	7	• <b>IoT Characteristics, Challenges &amp; Roadmap</b> .....	104
• <b>Introduction</b> .....	29	– Adapted Price Systems	
– Internet of Things Promises		– Form Factor	
– Definition		– Low Power Consumption	
– Report Scope		– Protocols & Standards	
– Sensors for IoT Applications		– Privacy & Security	
– Structure of IoT		– Market Traction	
– IoT Map Device		– Reliability & Lifespan	
		– Data to Process	
• <b>Seven Generations of IoT Sensors to appear</b> .....	55	• <b>IoT Development Examples</b> .....	136
– Industrial sensors – Description & Characteristics		– ACOEM Eagle	
– First Generation – Description & Characteristics		– EnOcean Push Button	
– Advanced Generation – Description & Characteristics		– NEST Sensor	
– Integrated IoT Sensors – Description & Characteristics		– Ninja Blocks	
– Polytronics Systems – Description & Characteristics		– And more...	
– Sensors' Swarm – Description & Characteristics			
– Printed Electronics – Description & Characteristics		• <b>Focus on Wearable Electronics</b> .....	167
– IoT Generation Roadmap		• <b>Technological Analysis</b> .....	184
• <b>Market Forecasts 2014 - 2024</b> .....	84	– Wireless Sensor Structure	
– Market Structure Value ( <i>in \$M</i> )		– Energy Storage Module	
– Market Value by Application Domain ( <i>in \$M</i> )		– Power Management Module	
– Volume Forecasts ( <i>Munits</i> )		– RF Module	
– Cost Breakdown per Module ( <i>in \$M</i> )		– Sensing Module	
– Market Value per Generation ( <i>in \$M</i> )			
– Market Volume per Generation ( <i>Munits</i> )		• <b>Conclusion</b> .....	273

# About the Authors

## Dr. Guillaume Girardin

**Dr. Guillaume Girardin works as a Market & Technology Analyst for MEMS devices and technologies at Yole Développement.**

**Guillaume holds a Ph.D. In Physics and Nanotechnology from Claude Bernard University Lyon I and a M.Sc. in Technology and Innovation Management from EM Lyon - School of Business.**

**Contact: [girardin@yole.fr](mailto:girardin@yole.fr)**

## Antoine Bonnabel

**Antoine Bonnabel works as a Market & Technology Analyst for MEMS devices and technologies at Yole Développement.**

**Antoine holds a M.Sc. In Microelectronics and Microsystems from Grenoble Institute of Technologies and a M.Sc. In Marketing and Business Management from Grenoble Graduate School of Business.**

**Contact: [bonnabel@yole.fr](mailto:bonnabel@yole.fr)**

## Dr. Eric Mounier

**Dr. Eric Mounier co-founded Yole Développement in 1998. He oversees technology analysis for MEMS-related manufacturing technologies and Optical MEMS (including micromirrors, micro-displays, autofocus and IR micro-bolometers) applications within the company. Eric has also developed a unique cost modeling tool, called “MEMSCoSim”, which is able to evaluate the cost of MEMS module manufacturing.**

**Contact: [mounier@yole.fr](mailto:mounier@yole.fr)**

# Companies Listed in this Report

ACOEM, AdvanticSys, Amazon, Apple, AT&T, Atmel, Ayla Networks, AVAGO Technologies, Blackberry, BOSCH, BLUECHIP, Cambridge CMOS Sensors, CEA Liten, China Mobile, Cisco, DataVeyes, DG Logik, DISCERA, Enfucell, EnOcean, EPCOS, FitBit, Flutura, Fraunhofer Institute, FREESCALE Semiconductor, GE, Georgia Institute of Technology, Google, HEWLETT PACKARD, Hillcrest Labs, HITACHI, Honeywell, HTC, IBM, Infomotion Sports Technologies, ioBridge, INTEL, Intellisense.io, InterSoft, INVENSENSE, Jabra, Jasper Wireless, Jawbone, Kionix, Kistler, KNOWLES Electronics, Koubachi, KTH, KwikSet, KWJ Engineering, Lenovo, Lightning Switch, Lime Microsystems, LogBar Inc., LumoBack, M2M Cyber Security, M2Mi, MC10 Inc., Marlow Industries, MEMSIC, Micropelt, Misfit, MURATA, MYO, Navisens, Nest, Netatmo, Newco, Nike, Nintendo, Nokia, NXP Semiconductors, OnFarm Systems, Optoi MicroElectronics, Oracle, Pebble, Purdue University, Rosemount, Samsung, SemTech, Sensaris, Sensata, Sensorion, Sensoror, SensorSuite, Sharp, Si Time, SiLabs, SmartThings, Sony, STMicroelectronics, Synkera Technologies, TeledyneDALSA, Texas Instruments, ThinFilm Electronics, TriQuint, Tronics MicroSystems, TSMC, Variable Technologies, UCLA, University of Harvard, VitalConnect, VTT MEMS, WiSpry, Withings, X-Fab MEMS Foundry, Xymox technologies Inc.

# Key Features

- The objectives of this report is to provide:

- Understanding of IoT value chain structure (device, data cloud), application areas and technologies involved

- Technology trends and evolution of IoT device in the coming years

- Market forecast for IoT devices in Munits and \$M for 2014 – 2024, with a focus on sensors

- IoT applications and examples overview (building automation, transportation, healthcare, industry, etc.) with a focus on wearable electronics

- The technological challenges faced by IoT devices, with a focus on wireless, energy, power, RF and sensing modules

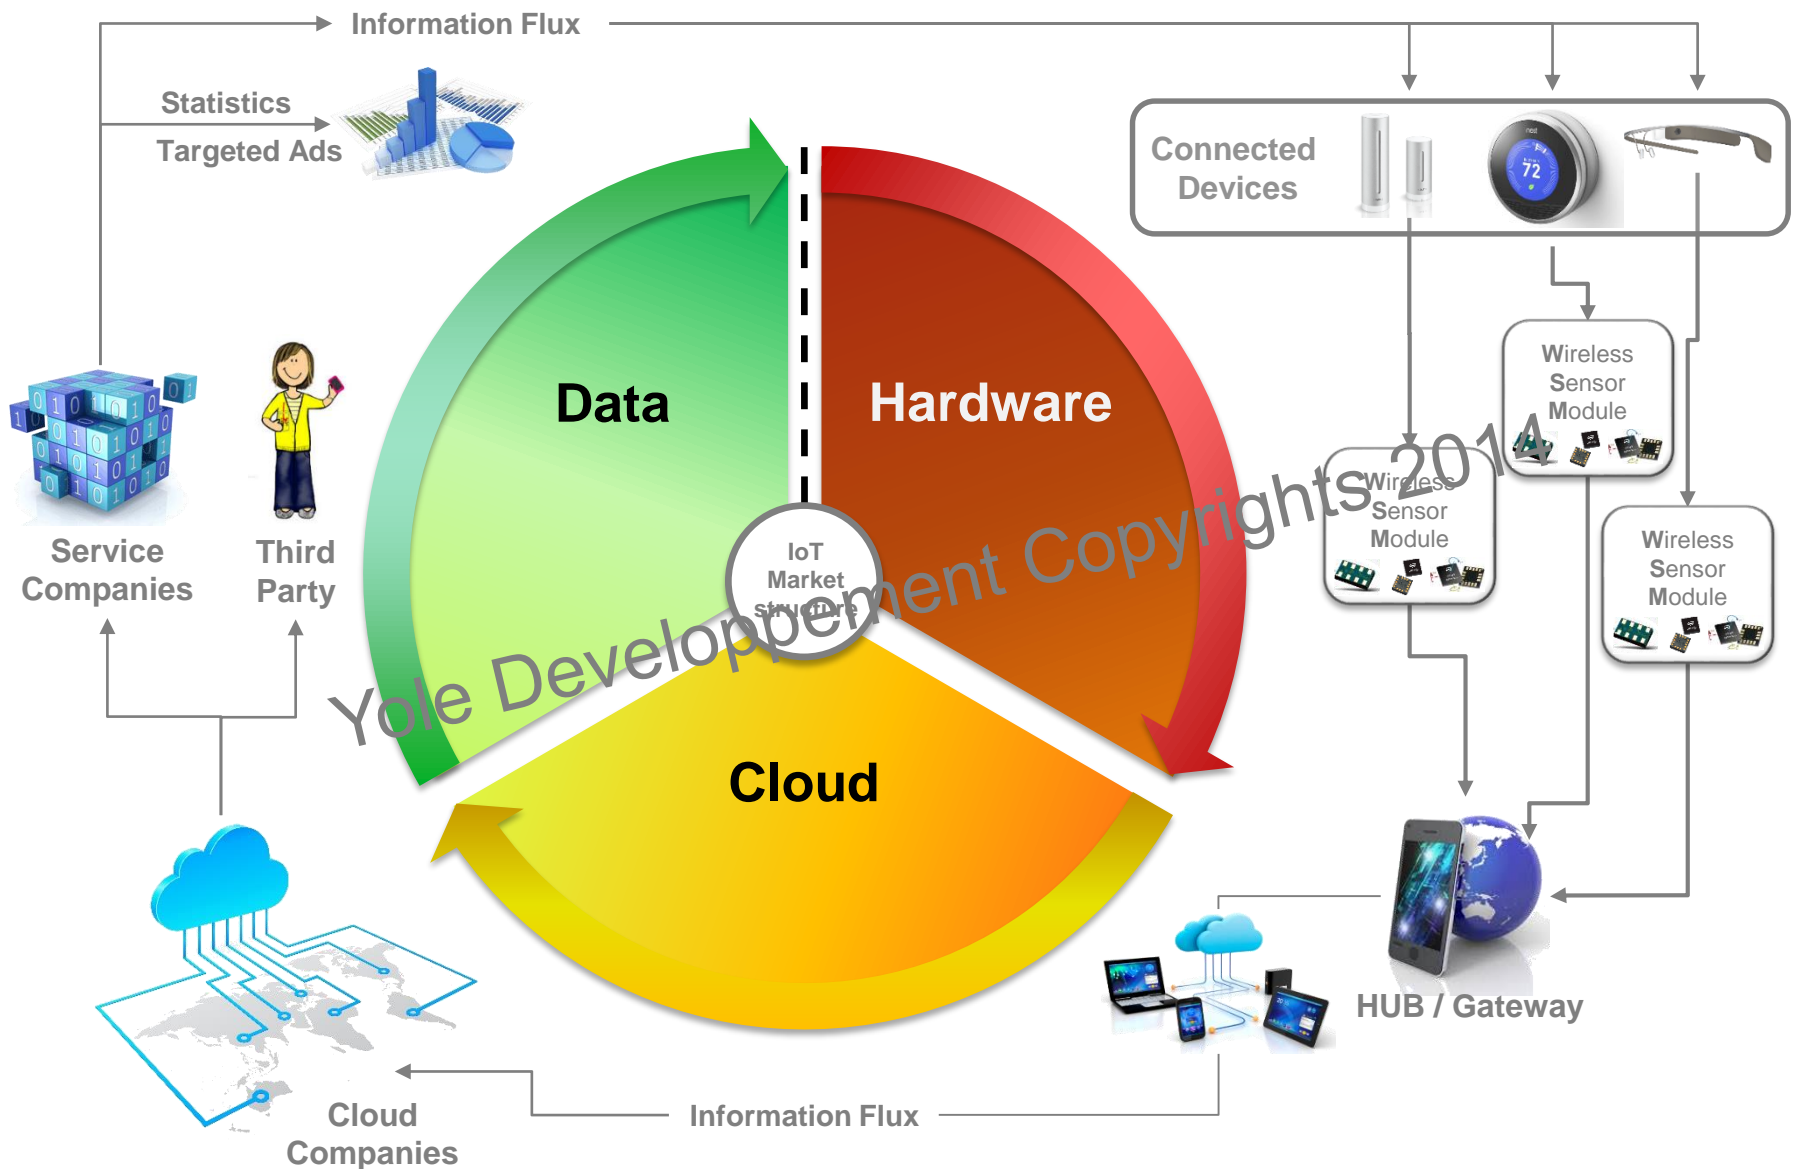

# Who Should Be Interested in this Report ?

- **R&D, Components Manufacturers Companies**
  - Evaluate market potential of future IoT technologies and products for new applicative markets
  - Spot new opportunities and define diversification strategies
  - Position your company in the ever changing IoT market structure
- **OEMs & Integrator Companies**
  - To evaluate benefits of integrating sensors in IoT devices
  - Get the list of key players and emerging start-ups in this industry
- **Cloud & Telecommunications Companies**
  - Understand the evolution of IoT devices and the market structure
  - Understand the differentiated value of products and services in this market
  - Identify new business opportunities and prospects
- **Financial & Strategic Investors**
  - Understand the potential of incoming Internet of Things revolution
  - Get the list of key players and emerging start-ups in this industry

# Report Scope

- **Yole's definition of the Internet of Things is as follows:**
  - Internet of Things devices is the aggregation of all the sensing modules that are linked to the Cloud – either directly or through a gateway – and which data is processed and valorized in any manner (through selling to a third party, through monitoring of a piece of equipment, etc.).
- This report looks at the Internet of Things market in general, but with a strong focus on **sensing modules**. We do not detail the cloud computing industry nor the data processing services.
- We do not include in our valorizations the benefit brought by IoT solutions through productivity gains. The values estimated are from hardware, cloud computing processing services and data processing services charging.

# IoT Global Market Structure (1/3)

# Area Of Application

**Building  
Automation**

**Retail & Logistics**

**Consumer &  
Home automation**

**Healthcare & Life  
Science**

**Industrial**

**Transportation**

**Security &  
Public Safety**

**Environment**

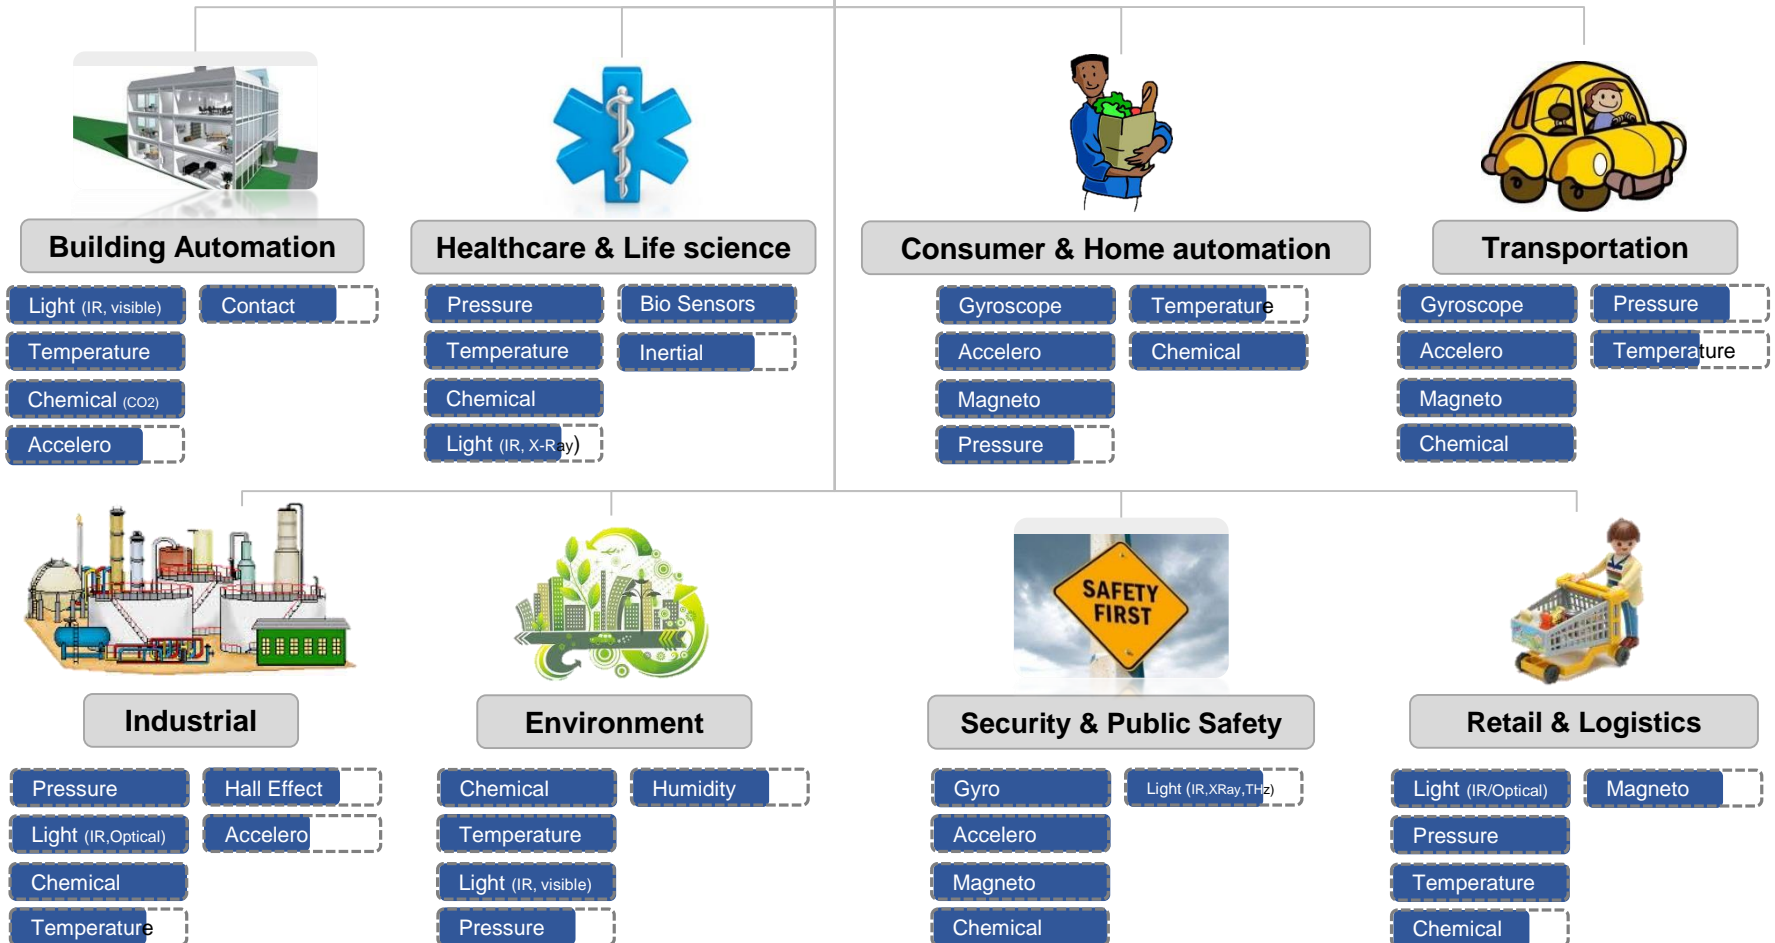

# Summary of Technologies of IoT

## Markets and Sensors

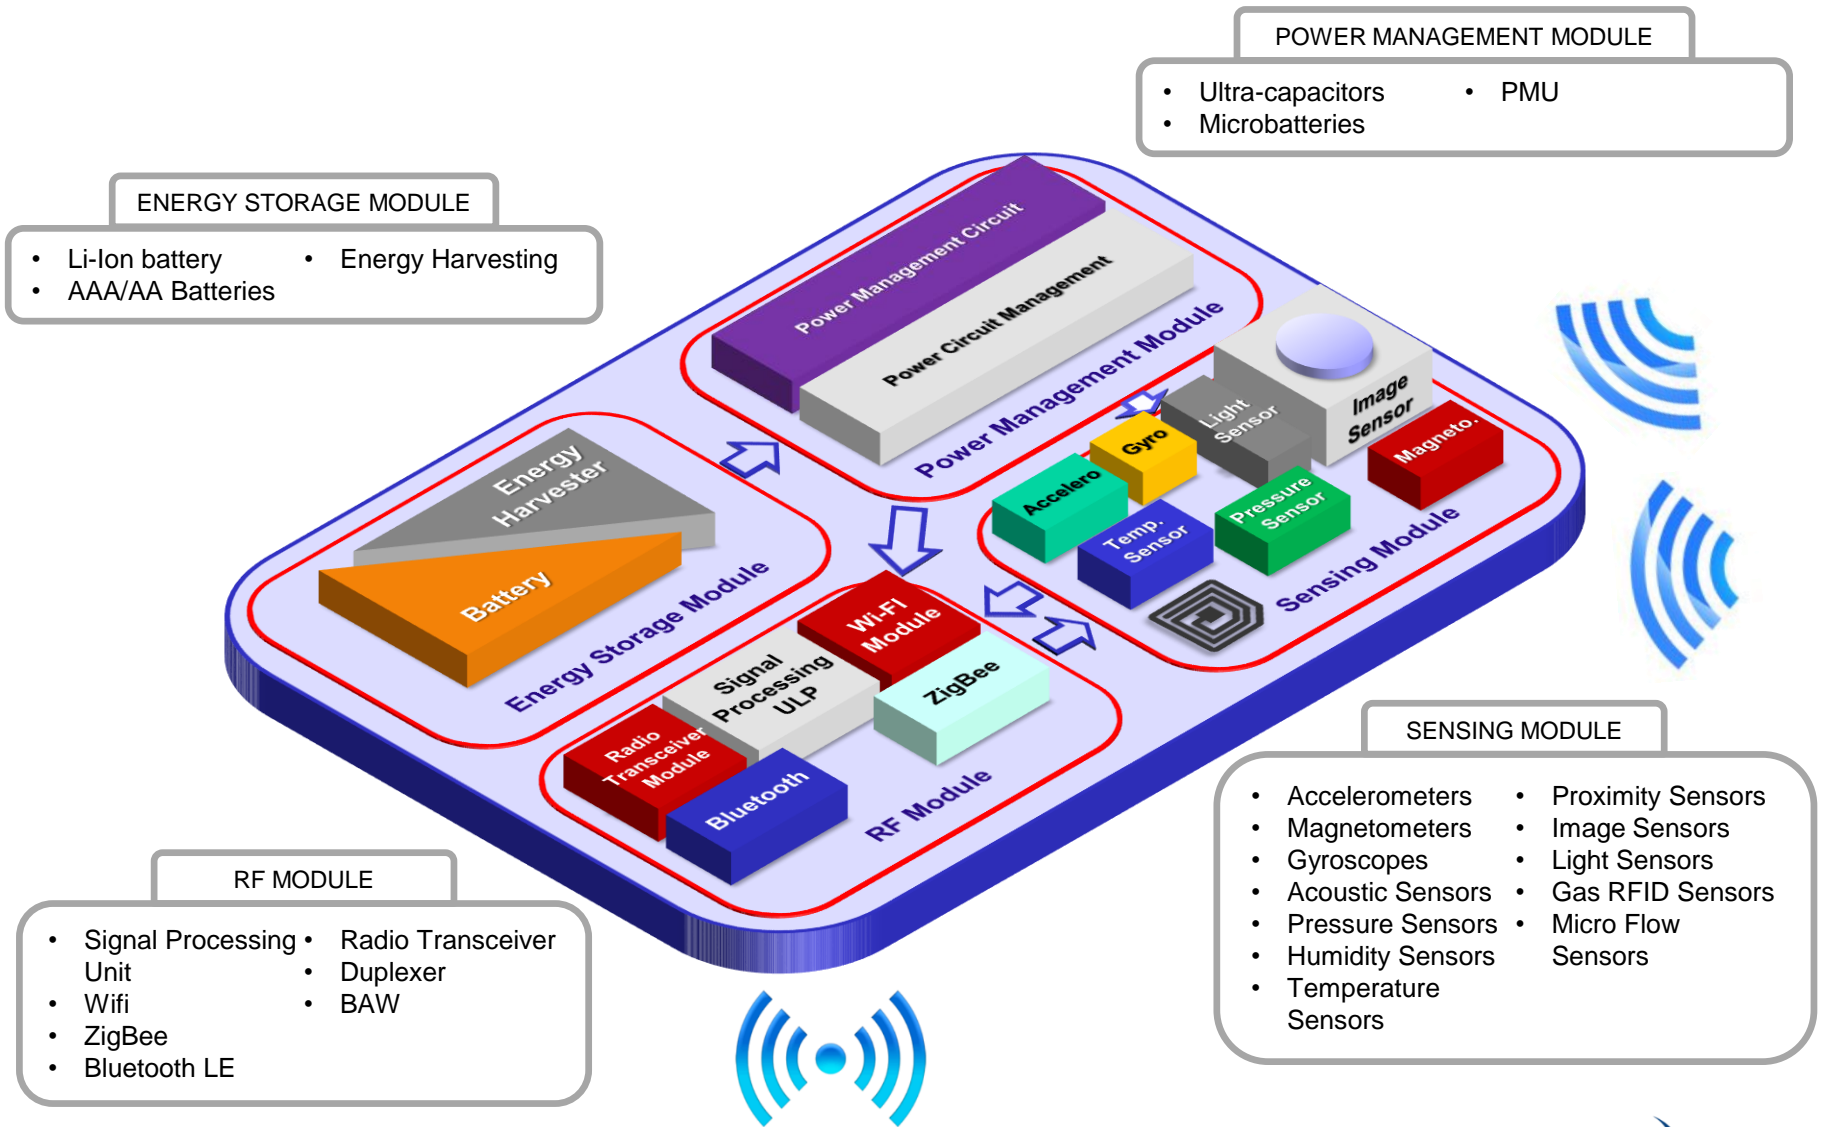

- Here are the main applications of IoT devices and sensors associated with.

Legend:  Sensor  
 Level of demand

### SENSORS OF THE INTERNET OF THINGS

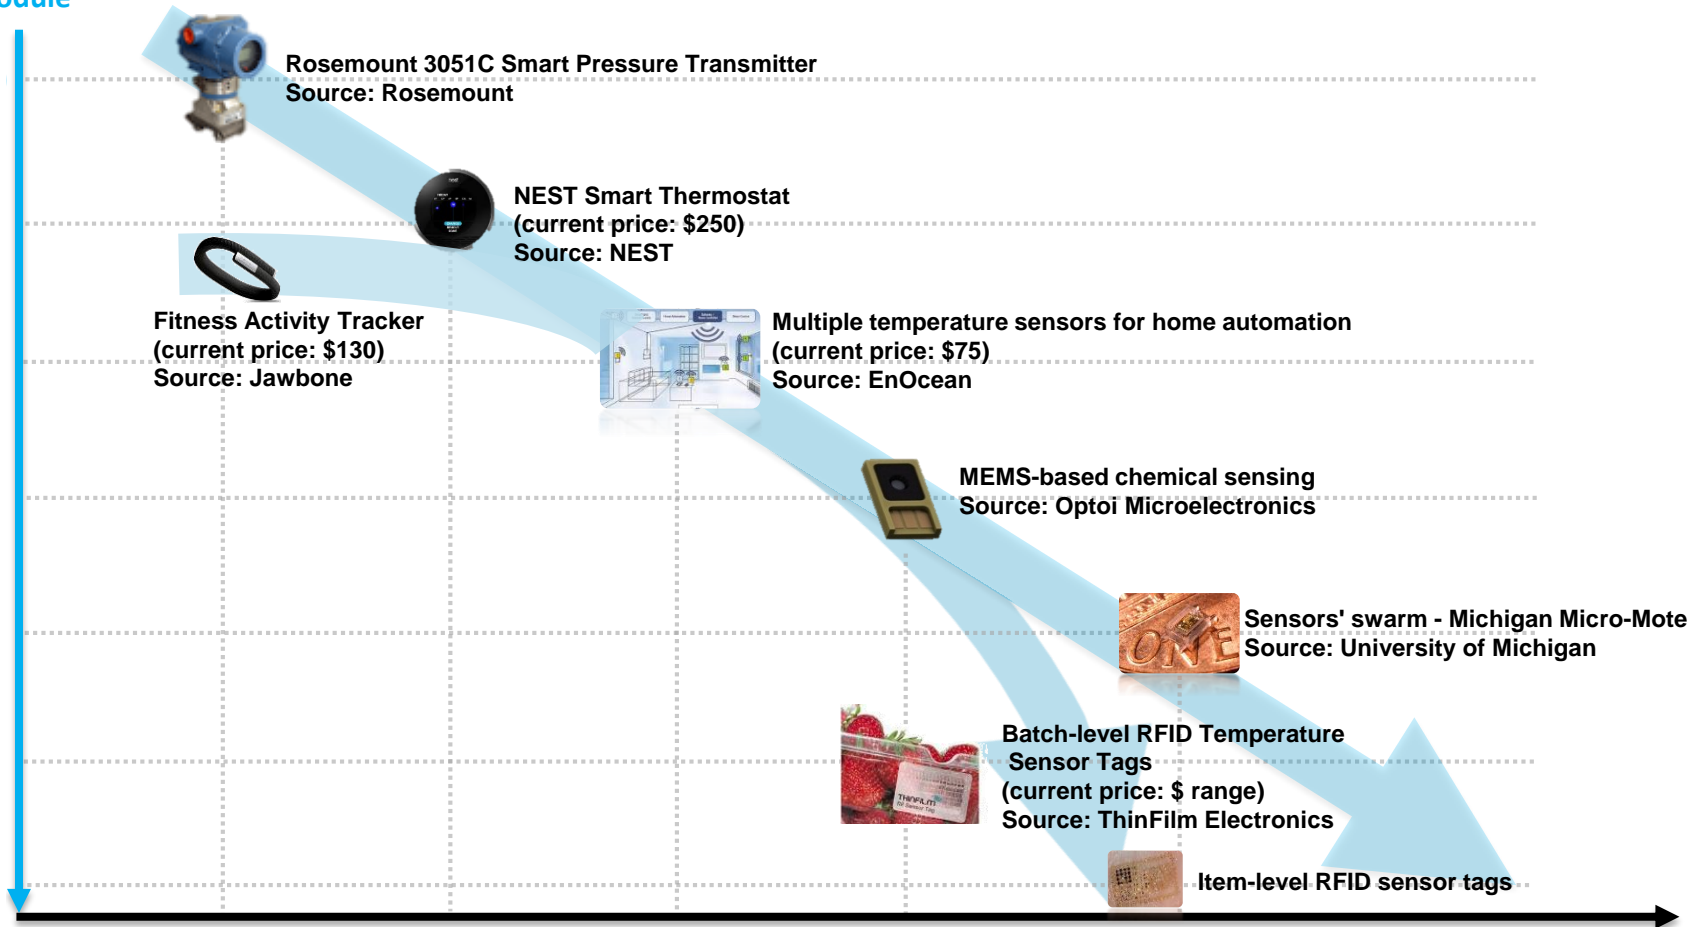

# IoT Wireless Sensors Map

# Solution Price IoT Roadmap

Solution Price  
per sensor  
module

# Summary of Technologies of IoT

## Forecast : Hardware Market Value by Application Domain

Market Value by Domains of Applications (\$M)

# Wearable Electronic Market

- The global wearable electronics market can be segmented in 5 categories. Head-Wear category includes helmet product and vision aid. There's also a category of products for neck-wear, with collars and necklace products that cover up electronics with jewels. Arm-Wear category is the most burgeoning category with multiples devices expected wristband, smart watches, ring, armband, etc. Body-Wear products include smart clothing, and devices monitoring back/spine position. And the last category concerns foot-wear.

Wearable Electronic Market Segmentation:

Arm-Wear market is one of the most promising market and many actors are targeting it.

# Wearable Electronic

A new opportunity for sensor fusion / processing

- **Wearable electronics is a new big opportunity for sensors**
  - Fitness / activity monitoring, healthcare, sports applications
  - In many cases the sensor acts as a hub
    - Basic calculations can be done at the device level
    - After transmission (enabled by low energy Bluetooth) : advanced software / fusion can be done by the smartphone
  - Bellow are many examples of such developments:

**i'm watch (2012)**

- Integrates accelerometer + magnetometer

**Moto 360 by Motorola (End 2014)**

- Other connected watches are currently in development by major OEMs (LG G Watch, rumors about Apple iWatch...)

**Pebble Watch (0,4 MUnits sold in 2013)**

- Features STMicroelectronics accelerometer

# Wearable Electronic / Connected Devices

## Examples of new devices (2/4)

**BodyMedia**

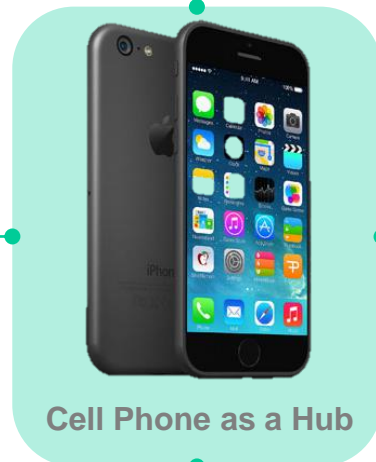

**(Acquired by Jawbone in 2013)**

- Integrates MEMS accelerometer (from Kionix and STMicroelectronics) in its systems for fitness application
- We note that no gyroscopes are used presently. This would enable more precise monitoring and new sport applications, however power consumption would be too high. It could be part of larger systems in the future.

**MYO by ThalmicLabs**

- Proprietary EMG muscle activity sensors
- Nine-axis IMU containing:
  - three-axis gyroscope
  - three-axis accelerometer
  - three-axis magnetometer

**Cell Phone as a Hub**

**Jawbone Up24**

**NodeKore from Variable Technologies**
